

**IN THE CLAIMS**

This listing of claims will replace all prior versions and listings of claims in the application.

1. (Previously Presented) A method for integrating change tracking with disconnected device document synchronization comprising:  
  
creating an original document on a computer;  
  
transferring said original document to a disconnected device, wherein said disconnected device is a portable electronic device capable of performing computations at any location;  
  
modifying said original document on said disconnected device to form a modified document;  
  
returning said modified document to said computer; and  
  
determining by said computer one or more modifications between said original document and said modified document.
2. (Original) The method of claim 1 wherein said step of determining further comprises:  
  
utilizing change tracking software.
3. (Original) The method of claim 2 further comprising:  
  
utilizing a data translation operation.
4. (Original) The method of claim 3 wherein said disconnected device is a PDA.

5. (Original) The method of claim 1, further comprising:  
determining whether to integrate said modifications into said original document.
6. (Original) The method of claim 1, further comprising:  
merging said original document and said modified document.
7. (Original) The method of claim 1 wherein said original document was created  
using an office productivity application.
8. (Original) The method of claim 1 wherein said document was modified using a  
companion application.
9. (Previously Presented) A data processing system comprising:  
an original document configured to be created on a computer and transferred to a  
disconnected device, wherein said disconnected device is a portable electronic device capable of  
performing computations at any location;  
a modified document comprising said original document modified on said disconnected  
device and returned to said computer; and  
a change tracker configured to determine by said computer one or more modifications  
between said original document and said modified document.

10. (Previously Amended) The data processing system of claim 9 wherein said change tracker comprises change tracking computer software.

11. (Previously Amended) The data processing system of claim 10 further comprising:

a data transfer operation.

12. (Previously Amended) The data processing system of claim 11 wherein said disconnected device comprises a PDA.

13. (Previously Amended) The data processing system of claim 9, further comprising:

an integrator configured to determine whether to integrate said modifications into said original document.

14. (Previously Amended) The data processing system of claim 9, further comprising:

a merger configured to merge said original document and said modified document.

15. (Previously Amended) The data processing system of claim 9 wherein said original document was created using an office productivity application.

16. (Previously Amended) The data processing system of claim 9 wherein said modified document was changed using a companion application.

17. (Previously Presented) A computer program product comprising:  
a computer usable medium having computer readable program code embodied therein configured to integrate change tracking with disconnected device document synchronization, said computer program product comprising:

computer readable code configured to cause a computer to create an original document;  
computer readable code configured to cause a computer to transfer said original document to a disconnected device, wherein said disconnected device is a portable electronic device capable of performing computations at any location;

computer readable code configured to cause a computer to modify said original document on said disconnected device to form a modified document;

computer readable code configured to cause a computer to return said modified document to said computer; and

computer readable code configured to cause a computer to determine by said computer one or more modifications between said original document and said modified document.

18. (Original) The computer program product of claim 17 wherein said computer readable code configured to cause a computer to determine further comprises:

computer readable code configured to cause a computer to utilize change tracking software.

19. (Original) The computer program product of claim 18 further comprising:  
computer readable code configured to cause a computer to utilize a data transfer  
operation.

20. (Original) The computer program product of claim 19 wherein said disconnected  
device is a PDA.

21. (Original) The computer program product of claim 17, further comprising:  
computer readable code configured to cause a computer to determine whether to integrate  
said modifications into said original document.

22. (Original) The computer program product of claim 17, further comprising:  
computer readable code configured to cause a computer to merge said original document  
and said modified document.

23. (Original) The computer program product of claim 17 wherein said original  
document was created using an office productivity application.

24. (Original) The computer program product of claim 17 wherein said modified  
document was changed using a companion application.

25. (New) The method of claim 1 wherein utilizing change tracking software further  
comprises:

identifying differences between said original document and said modified document and storing difference information to indicate the identified differences.

26. (New) The data processing system of claim 9 wherein said change tracking computer software identifies differences between said original document and said modified document and stores difference information to indicate the identified differences.

27. (New) The computer program product of claim 17 wherein said computer readable code configured to cause a computer to utilize change tracking software further comprises:

computer readable code configured to identify differences between said original document and said modified document and store difference information to indicate the identified differences.
